

The Gate Stops Here!

✓**Superior Strength**—Heavy Duty 10GA Steel, G90 Zinc, made to last! Rated for 73MPH

✓**Durability**—Does not Rot or weaken over the years. Standard wooden posts rot, whether they are in dirt or concrete, and eventually weaken leading to failure. Z/Posts will never rot and are protected from rust by a heavy zinc coating.

✓**Easy To Use**—No Other Brackets or other hardware necessary. Each side flange measures 2-1/4" for maximum overlap. The center bar is 1-1/2" to line up perfectly with a standard 2x4 rail. The continuous hole pattern makes installation easy and allows kick boards, top caps, lattice work and more to be attached with no additional hardware or brackets.

✓**Versatile**—The same post can be used for Line Post, End Post, Gate Post or Gate Stop.

✓**Solid**—Z/Posts act as a natural gate stop, saving hinges from unnecessary wear and tear and adding years to the life of the gate. No more slamming, sagging, or slipping., Z/Posts make gates last!

✓**Contractor Friendly**—Z/Posts are great for contractors. They nest perfectly and transport to the jobsite with ease. Without all of the extra hardware, contractors don't have to carry extra inventory and fumble around for the right components. The wide flange (2-1/4") makes it very easy to fasten lumber to the posts.

✓**Attractive**—Z/Posts can easily be covered with a fence plank in a good neighbor fence application, or they can be painted to match the rest of the fence if desired. In most cases they are left to their natural galvanized steel finish which gives the fence a sturdy look without detracting from its beauty.
